

Instructions for using grid overlay with aerial photographs:

- Print grid overlay onto an acetate transparency and then lay over the aerial photograph to assist with measuring distances and estimating percent cover
- The grid must be used with aerials at a scale of either 1 cm = 25 m or 1 cm = 50 m
- When using with CRAM aerials at 1 cm = 25 m, each grid cell is 10 meters by 10 meters; when using with CRAM aerials at 1 cm = 50 m, each grid cell is 20 meters by 20 meters
- When printing from Adobe Acrobat, the **Page Scaling must be set to "None"** in order for the scale to not be changed when trying to fit the printed area to the printer margins. Page Scaling is located in the Print dialog box under Page Handling (see below).
